Languages I Speak

- Ruby

- HTML / CSS / SASS / HAML / Liquid

- Javascript

Frameworks So Far

- Rails / Sinatra

- AngularJS

- JQuery

EXPERIENCE

Jr. Engineer, CrowdEngine Inc.

Murray, UT — Feb 2015 - Present

At CrowdEngine, I'm mainly responsible for front-end customization for clients using Shopify's Liquid templating language. I also assist with building and maintaining internal tools, as well as features requested by clients. I have taken it on myself to improve the application wherever possible. I'm currently building out Integration Tests.

Accomplishments

- Exercise creative problem solving to maintain complex, multi-tenanted Rails platform for white label crowdfunding apps
- Front-end customizations on multiple websites for multiple clients
- Learned startup strategy and general business knowledge

Full Stack Web Developer Student, DevMountain

Provo, UT — Dec 2014 - Feb 2015

I had the opportunity to enroll and complete DevMountain's 12 week immersive bootcamp, and while I was there I built a handful of projects using MongoDB, Express.js, AngularJS, and Node.js to create full stack websites for individual and group projects. I also utilized GitHub for source version control and team collaboration.

Projects

- Worked at Hirevue at the time, so I built a tool using Hirevue's API to help me automate some of my customer support duties
- Used Strava's API to build a tool to compare my data against a friend's
